SYSTEM SOLUTION SOLVES TRACKING CHALLENGE

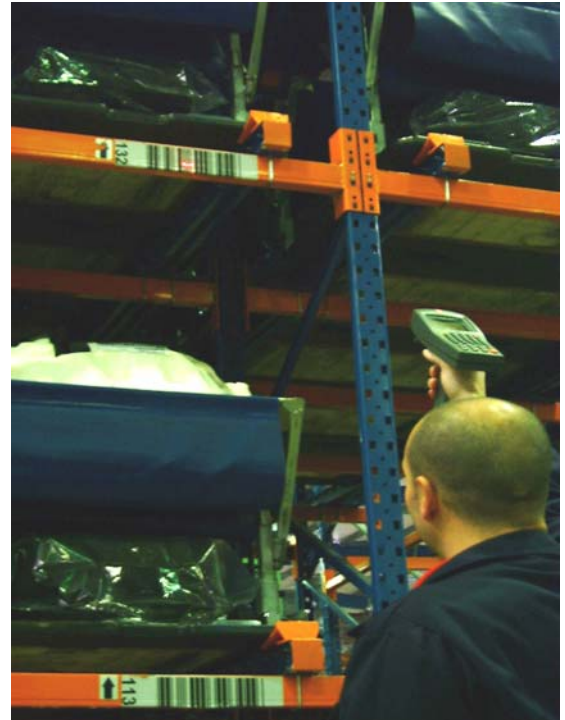

New software to improve just-in-time (JIT) delivery of components to Honda's Swindon plant for Nissin UK Ltd has been developed by GSM Printer and Label Systems.

Nissin needed to track individually numbered seat sets in order for them to arrive at the production line just in time. GSM Printer and Label Systems developed an automated serialised stock control system using a wireless network which

would keep track of each individual seats throughout the whole production process.

Products are shipped from suppliers, like Johnson Controls, and are held at Nissin until they are needed at the Honda production line. The system ensures that the seats are delivered in the right order, just in time, with no over supply or shorts, which in turn means no downtime for the production line at Honda.

GSM PLS supplied bespoke software and training and used the Symbol 2Mbs Ethernet access point and the long range PDT6800 gun scanner in the installation of this system. Senior Systems Engineer, Mark Walker is pleased with the result. "The new stock control system offers huge time and cost savings. It also reduces the risk of human error and ensures the smooth running of the whole operation."

GSM Printer and Label Systems specialises in providing label printing, bar coding and data capture solutions to a wide range of industries. The GSM Group is one of Europe's largest manufacturers of printed labels and nameplates in metal and plastics and has manufacturing sites in Wales, Oxford and Yorkshire.
